

ABSTRACT

A van is provided within its carrying compartment with an installation for use in the safe storage against theft of tradesmen's tools, such, for example, as electric
5 drills. The installation comprises a substantially L-shaped frame, and several panels hingedly connected to the frame for movement between a collapsed, non obtrusive state in which chamber front and side panels are prostrate on, or adjacent to the compartment floor, and an erect state in
10 which these are able to cooperated with a lid panel also hinged to the frame to create the chamber.
